

Master Plan — Roadmap

A step-by-step framework for building the business, one box at a time — foundational decisions first, then branding, then client acquisition, then delivery. Each step is locked before moving to the next.

Status

Step	Status
1. Decide Service	
2. Establish ICP

Step	Status
19. Deliver Results	
20. Build AI Systems	
21. Get Results	

Step 1 — Service

Defined what the business does, in one sentence, before worrying about name, logo, website, or building the AI system itself.

Locked:

We help residential solar installers in Gauteng convert more of their existing enquiries into qualified sales appointments through immediate AI-powered qualification, automated follow-up and appointment booking.

This is a lead *conversion* service, not lead *generation* — the client already has leads; we don't run their ads. That correction was made after an earlier draft implied lead generation. Lead generation is a possible future expansion once the conversion system is proven.

Step 2 — ICP

Narrowed "South African solar installers" down to a specific, buyable profile.

Locked:

Business type: residential solar installers (not commercial)

Location: Gauteng

Size: 2-10 people, at least one dedicated salesperson

Must already have: some paid ads/lead flow, a salesperson, spare install capacity, an existing website

Excluded: solo installers, large installers, commercial solar, outside Gauteng

Step 3 — Offer

Defined exactly what a client gets for their money — components, responsibilities, definitions, and pricing model.

Problem hierarchy: slow follow-up (primary) causes good leads to go cold; unqualified leads reaching sales (secondary) wastes rep time.

Locked decisions:

Qualified lead = customized per client (base template: Gauteng homeowner, property owner, bill above client-set threshold, timeframe, suitable roof) — more accurate than a universal standard, more setup work per client

Booked appointment = confirmed calendar slot, not attendance (attendance tracked/reported separately)
Pricing = setup fee + monthly retainer to start; performance-based hybrid deferred until real conversion data exists
Wording corrected from "only qualified, appointment-ready leads reach the sales team" to "only leads that meet the agreed qualification criteria are passed to the sales team" — more defensible, since the AI can't guarantee genuine buying readiness

Step 4 — Agency Name

Locked: Heliast (styled "Heliast" or "HELiAST").

Core positioning:

Heliast helps residential solar installers in Gauteng turn existing enquiries into qualified sales appointments through immediate AI-powered qualification, follow-up and booking.

Short version: Intelligent lead conversion for solar installers.

Underlying idea: Evaluate → Qualify → Connect → Convert.

Clearance completed: CIPC registered-company search, CIPC reserved-name search, CIPC trademark search, LinkedIn, Instagram, X, and general web — no significant South African or industry-specific collision found. `heliast.co.za` is available and set as the primary domain; `heliast.com` is owned but unused, so the business won't be built around that domain. Formal CIPC name reservation (CoR 9.4 Confirmation Notice) is the final legal step, not yet done — CIPC allows up to four proposed names per application, so backups (e.g. Heliast Technologies, Heliast Systems, Heliast Solutions) can be submitted alongside the primary choice.

Step 5 — Brand Identity

Full brand system defined and applied before building anything else.

Name & positioning: Heliast — *Turn More Leads Into Appointments* (primary tagline; "Intelligent Lead Conversion for Solar Installers" used only as a secondary descriptor, e.g. on the billboard).

Underlying idea: Evaluate → Qualify → Connect → Convert.

Logo: abstract H-mark encoding Flow → Filter → Result (Qualification → Opportunity) — deliberately non-literal (no solar panel iconography).

Colour palette: Deep Indigo `#0A0FFF` (primary), Electric Blue `#000FFF` (accent), Bright Blue `#3B82F6` (secondary); White, Cool Gray `#E5E7EB`, Slate `#1F2937` (neutrals).

Typography: Manrope (headings/brand), Inter (body/UI).

Brand attributes: Precise, Intelligent, Professional, Performance-driven, Modern.

Applied system: logo lockup, app icon, business cards, apparel, billboard — consistent across all touchpoints.

Step 6 — Website Current

Build heliast.co.za around the locked service, ICP, offer, name, and brand system above.

PDF Lead Magnet (supporting asset, not a roadmap step)

Working title: *The Solar Installer's Guide to Turning More Leads Into Sales Appointments*

Sits inside the future client-acquisition system (once outreach/lead-gen steps are reached): free educational resource → demonstrates expertise → CTA ("Want us to build this system for your solar company?") → sales conversation → client. Framed around the business owner's problem ("I paid for these leads — why aren't they becoming sales?"), not around teaching AI.

See the companion document, *AI Lead Generation Business — Foundation*, for the full detail behind each locked step.
